

Fork Positioner for Forklift

Forklift Fork Positioners - A fork positioner is a tool made out of high quality materials intended to be able to endure the most demanding operations and work environments. This piece of equipment enables the person driving to work the blades hydraulically without leaving the seat. Side shifting units have the extra ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and position in a quicker and more efficient way.

The fork pocket is quite unique and can enable the individual operating it to safely sway the forks into position without any fear of destroying the positioning cylinders. This allows the driver the option to be able to execute simultaneous or independent fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on available units.
